

How to download, install and assign DS Colour Labs Paper Profiles to your images

1. Go to the following web address:
<http://www.dscolourlabs.co.uk/paperprofiles.cfm> and download the desired profile (e.g. Fuji 570 c/a Glossy paper) saving it to your Desktop (**DO NOT RUN**) .
2. Once saved safely on your Desktop – double click this and the profile will install directly onto your PC and will show within Photoshop's profiles.
3. To assign the desired paper profile to your image in Photoshop, click Edit / Assign Profile and the following box will pop on screen.

Click profile and from the drop down menu select the paper profile needed, here I have selected Glossy to match my chosen paper finish for printing.

Note

The above information is to assign the correct colour profile to your images, which will make it compatible with the paper and software used by DS Colour Labs. It must be said that you do not have to assign profiles to use DS Colour Labs and many members have had no problem with their service.

Hope this helps
